

Good at Math Tips

- When the game starts, you can choose to practice **addition/subtraction**, **multiplication/division**, or **all 4 at once**. Click on a door to start a level.
- To save your classmates from the zombies, **click** on each zombie to make a math example appear. When you enter the answer, the zombie will vanish.
- To enter the answer to the math example, click the **number buttons** on the screen. If you're using a **touch-screen device**, you can also draw the number in the box above the buttons.
- Try to answer each zombie's math example **before** it gets to the chairs! If **three** chairs are broken, you'll lose the round. The game keeps track of broken chairs using the **chair icons** in the upper right-hand corner of the game window.
- Remember that it's just a game! Losing a level **doesn't** mean you're "bad at math." You can be good at math but not as good at fighting zombies, although we think fighting zombies can make math more fun.
